# **Round cylinders DSNU**

Festo Core Range

With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added

the quickest delivery.

The Core Range offers you the best value for your automation tasks.

Worldwide:

Fast:

Simply good:

Solves the majority of your automation tasks

Quickest delivery – wherever, whenever

Expected high Festo quality Easy and fast to select

### Key features

#### At a glance

DSNU-8 ... 63

- Stainless steel piston rod
- Good running performance and long service life
- Piston rod with male and female thread

• Extensive range of accessories makes it possible to install the cylinder virtually anywhere

#### DSNU-8 ... 25

• The basic versions conform to ISO 6432, variants are based on these standards

#### Wide choice of variants

DSNU

- Piston Ø 8 ... 63 mm
- Cylinder barrel made of stainless
- · Bearing and end caps made of wrought aluminium alloy

# DSNU-...-MA

- Piston Ø 8 ... 63 mm
- Cylinder barrel made of stainless
- Bearing cap with threaded flange
- · Short end cap with axial supply port

#### DSNU-...-MQ

- Piston Ø 8 ... 63 mm
- Cylinder barrel made of stainless
- Bearing cap with threaded flange
- Short end cap with lateral supply

#### DSNU-...-MH

- Piston Ø 8 ... 63 mm
- Cylinder barrel made of stainless
- Direct mounting on bearing cap
- Short end cap with lateral supply

#### DSNU-...-KP

- Piston Ø 8 ... 63 mm
- Cylinder barrel made of stainless steel
- With clamping unit

#### DSNU-...-Q

- Piston Ø 12 ... 63 mm
- Cylinder barrel made of stainless steel
- With square piston rod

#### **Cushioning types**

#### Mode of operation

#### **Application**

### **Advantages**

#### Cushioning P

- The drive is equipped with flexible polymer end-position cushioning
- Small loads
- Low speeds
- Low impact energies
- · No adjustment required
- Saves time

#### **Cushioning PPS**

- The drive is equipped with self-adjusting end-position cushioning
- Small to medium loads
- Low to medium speeds
- Medium impact energies
- No adjustment required
- Saves time
- Powerful

### **Cushioning PPV**

- The drive is equipped with adjustable end-position cushioning
- · Medium to high loads
- High speeds
- · High impact energies
- Very powerful

### Key features

| Further variants  | 1   |   |
|-------------------|---|---|
| Symbol            | Key features  | Description   |
|                   | S2 Through piston rod   | For working at both ends with the same force in the forward and return stroke, for attaching external stops   |
|                   | S6 Heat-resistant seals   | Temperature resistance up to max. 120°C   |
| $\longrightarrow$ | S10 Constant motion at low piston speeds                                      | Suitable for very slow and constant (slow speed) and stick-slip-free movements. With very low break-away pressure compared with the standard (low friction).  |
| $\leftrightarrow$ | L Low friction  | <ul> <li>Break-away pressure: low</li> <li>Dynamic response: Suitable for very fast movements, especially at low operating pressures</li> <li>Application example: Very dynamic movements with no standstill</li> </ul> |
| -                 | K2 Extended male piston rod thread  | -   |
|                   | K3 Female piston rod thread   | -   |
|                   | K5 Custom piston rod thread   | Metric standard thread to ISO   |
| <b>—</b>          | K6 Shortened male piston rod thread   | -   |
| <b>—</b>          | K8 Extended piston rod  | -   |
| 1,444             | R3 High corrosion protection  | All external cylinder surfaces comply with corrosion resistance class CRC 3 to Festo standard 940070. The piston rod is made from corrosion- and acid-resistant steel   |
|                   | R8 Dust protection (wiper seal) (32 63 mm)                                    | The cylinder has a hard-chrome-plated piston rod and a hard wiper seal, which protects against dry, dusty media   |
|                   | A1 Scraper variant (12 63 mm)   | Increased chemical resistance: For longer service life, e.g. when using cooling lubricants.   |
|                   | A6 Metal scraper (32 63 mm)   | The cylinder has a hard-chrome-plated piston rod and metal scraper, which scrapes off hard particles (e.g. welding spatter) that stick to the piston rod. For use in welding systems, for example                       |
|                   | F1A Recommended for production plants for manufacturing lithium-ion batteries | Cylinders free of copper, zinc and nickel (≤ 1%)  |

#### For manufacturing lithium-ion batteries

DSNU-...-F1A

Recommended for production plants for manufacturing lithium-ion batteries.

Metals with copper, zinc or nickel as the main constituent are excluded from use. Exceptions are nickel in steels, chemically nickel-plated surfaces, printed circuit boards, cables, electrical plug connectors and coils.

#### Accessories

Your Festo contact partner can provide information about which accessories are suitable for manufacturing lithium-ion batteries.

#### Longer service life with protective bellows kit DADB

The bellows protects the piston rod, the seal and the bearing from the effects of a wide range of media, which has a positive impact on the service life of these components.

The bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air for the kit must be ducted via a pressure compensation hole in the connection part [1].

The kit protects the piston rod, seal and bearing against a wide variety of media, for example:

- Dust
- Grease
- Chippings
- Fuel
- Oil

- Cannot be used on the bearing cap in combination with bellows kit DADB.
- The bellows kit protects the cylinder (piston rod, seal and bearings) against a wide range of media and thus prevents premature wear.
- It can only be used in combination with an extended piston rod (K8)

<sup>1)</sup> For DSNU-12-... PPV (pneumatic cushioning adjustable at both ends): 0.2 ... 1 MPa (2 ... 10 bar)

No corrosion stress. Applies to small, visually unimportant standards-based parts such as threaded pins, circlips and clamping sleeves which are usually only available on the market in a phosphated or burnished version (and possibly oiled) as well as to ball bearings (for components < CRC 3) and plain bearings.

Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment. Corrosion resistance class CRC 3 to Festo standard FN 940070

High corrosion stress. Outdoor exposure under moderate corrosive conditions. Externally visible parts with primarily functional surface requirements which are in direct contact with a normal industrial environment.

### Datasheet

#### **Dimensions**

DSNU-8 ... 25

S2 – Through piston rod

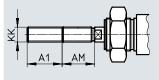

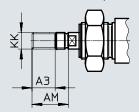

The thread types at both piston rod ends are identical. In combination with variant Q, the left piston rod end is square, the right piston rod end round.

- = plus stroke length
- ++ = plus 2x stroke length

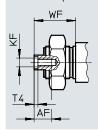

K2 – Extended male piston rod thread

 $K6-Shortened\ male\ piston\ rod\ thread$ 

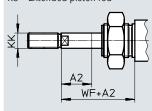

K3 – Female piston rod thread

K5 – Custom piston rod thread

K8 – Extended piston rod

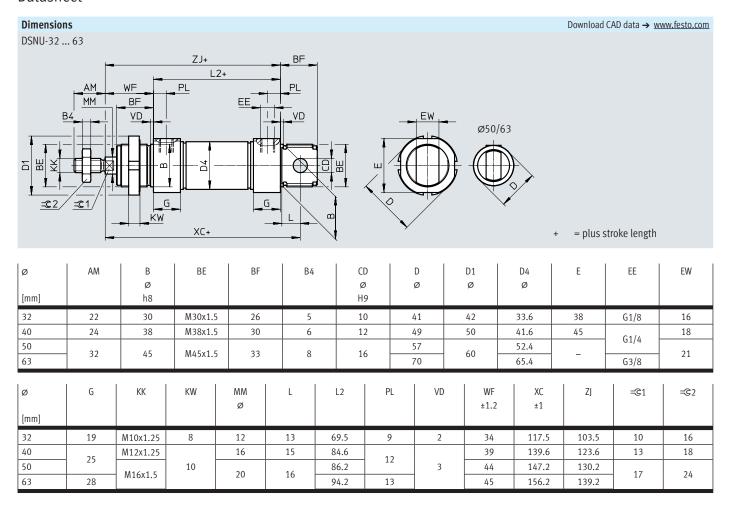

If variant K8 is required in combination with S2, the piston rod will only be extended at one end.

### Round cylinders DSNU-KP, with clamping unit

### Datasheet

Diameter 8 ... 25 mm ISO 6432

- **D** - Diameter 32 ... 63 mm

Stroke length 1 ... 500 mm

### - 🖣 - Note

If used in safety-oriented applications, additional measures are necessary, e.g. in Europe the standards listed in the EC Machinery Directive must be observed. Without additional measures in accordance with legally specified minimum requirements, the product is not suitable as a safety-oriented component in control systems.

S2 – Through piston rod

The thread types at both piston rod ends are identical. The clamping unit is mounted at only one end.

In combination with variant Q

(→ page 46) the right piston rod is square, the left piston rod round. The clamping unit is mounted on the left-hand, round piston rod.

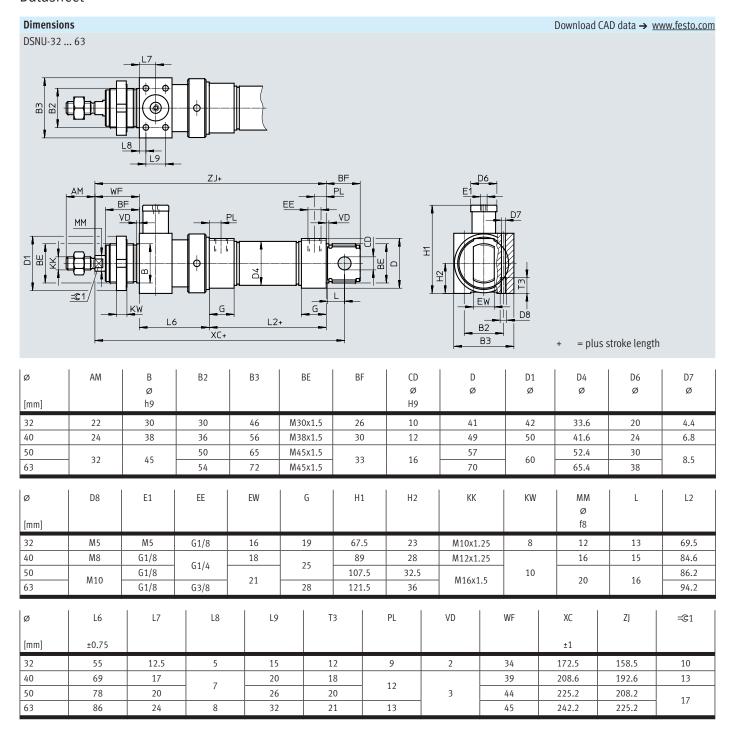

In combination with variant K8 the piston rod extension is on the right piston rod only. The clamping unit is mounted on the left piston rod that is not extended.

+ = plus stroke length ++ = plus 2x stroke length

In combination with variant K8 and Q, the piston rod extension is on the right, square piston rod only.

<sup>2)</sup> Note operating range of proximity switches

Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment. Corrosion resistance class CRC 3 to Festo standard FN 940070

High corrosion stress. Outdoor exposure under moderate corrosive conditions. Externally visible parts with primarily functional surface requirements which are in direct contact with a normal industrial environment.

[1] -... Longer strokes on request

[2] PPV Not with MA

[3] A Minimum stroke ≥ 10 mm required for reliable sensing

[4] MQ, MA Not with S2

[5] MH Not with combinations: Q-R3, S6-R3. Not with KP

#### · 📱 - Note

The bellows kit DADB must not be used in combination with the variant Q.

## - Note

Cylinders with position sensing require a minimum stroke of 10 mm to ensure reliable sensing.

Longer strokes on request

<sup>1)</sup> Corrosion resistance class CRC 1 to Festo standard FN 940070

Low corrosion stress. Dry internal application or transport and storage protection. Also applies to parts behind covers, in the non-visible interior area, or parts which are covered in the application (e.g. drive trunnions). Corrosion resistance class CRC 4 to Festo standard FN 940070

Particularly high corrosion stress. Outdoor exposure under extreme corrosive conditions. Parts exposed to aggressive media, e.g. in the chemical or food industries. Such applications may need to be safeguarded by means of special testing ( > also FN 940082), using appropriate media.

<sup>1)</sup> Corrosion resistance class CRC 1 to Festo standard FN 940070

Low corrosion stress. Dry internal application or transport and storage protection. Also applies to parts behind covers, in the non-visible interior area, or parts which are covered in the application (e.g. drive trunnions). Corrosion resistance class CRC 4 to Festo standard FN 940070

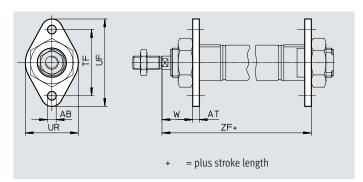

Particularly high corrosion stress. Outdoor exposure under extreme corrosive conditions. Parts exposed to aggressive media, e.g. in the chemical or food industries. Such applications may need to be safeguarded by means of special testing ( also FN 940082), using appropriate media.

<sup>1)</sup> Corrosion resistance class CRC 1 to Festo standard FN 940070

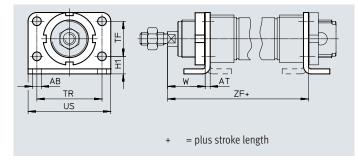

Low corrosion stress. Dry internal application or transport and storage protection. Also applies to parts behind covers, in the non-visible interior area, or parts which are covered in the application (e.g. drive trunnions). Corrosion resistance class CRC 4 to Festo standard FN 940070

Particularly high corrosion stress. Outdoor exposure under extreme corrosive conditions. Parts exposed to aggressive media, e.g. in the chemical or food industries. Such applications may need to be safeguarded by means of special testing (

also FN 940082), using appropriate media.

#### Travel speed v as a function of tubing length l

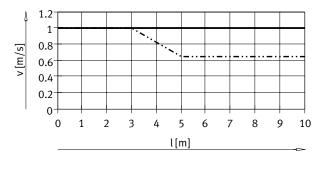

The bellows kit is a leak-free system.

To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a pressure compensation hole in the connection part.

The pressure generated in the bellows kit by the positioning motion is primarily defined by the travel speed and tubing length. The recommended tubing length based on the travel speed of the drive can be read from the graph.

# - 🖣 - Note

The push-in fittings in the adjacent table must be used for the pressure compensation hole.

Silencers can be used as an alternative. This reduces the travel speed slightly.

<sup>1)</sup> The dimension corresponds to the K8 value (extended piston rod) of the drive

#### Ordering data - Bellows kit

An extended piston rod (order code K8) is absolutely essential when using a bellows kit → Ordering data – Modular product system.

The necessary dimension for K8 as a function of piston diameter and cylinder stroke as well as the corresponding bellows kit is indicated in the table below:

#### Order example:

Selected round cylinder:

DSNU-25-320-PPV-A-MQ-...

The dimension for the corresponding K8 value (see table): 101  $\mbox{mm}$ 

Complete order reference for round cylinder:

DSNU-25-320-PPV-A-MQ-...-101K8

The corresponding bellows kit:

DADB-S1-25-S301-350

| Cylinder | data    |          | Bellows kit |                     | Cylinder | data    |          | Bellows kit |                     |

#### Position transmitter

The position transmitter continuously senses the position of the piston.

It has an analogue output with an output signal relative to the piston position.
